* Estonia: due to a modification in the methodology, the change 2016/2015 should be interpreted with caution.

** Crude rate of population change represents the ratio, expressed per 1 000 residents, between the increase of population during 2015 (difference between the population on 1 January 2016 and the population on 1 January 2015) and the average population in 2015.

Data are provisional

* The crude rate is calculated as the ratio of the number of events to the average population in a given year. For easier presentation, it is multiplied by 1 000; the result is therefore expressed per 1 000 residents.
